**JOHN BOWEN, Editor**  
THURSDAY, NOVEMBER 12, 1914

Do We? The rebellion is shaping up for a Maritz finish.

Is Edmonton to be governed next year in the interests of the citizens or in the interests of "big iron"?

It is reported that the command of the Kuden is among the survivors. That is very good news. Drowning or shooting is too good for a rascal who holds false colors. He deserves hanging like any other pirate.

The council did well to decide promptly to test the Viking gun well with a view to taking it over. The men who tied up their money in the enterprise should have it returned to them. It is a pity that the council when it is established officially that the conditions are so voluminous and pressure have been attained.

It is said that so far members of the Provincial Opposition have not taken part in the Wetaskiwin campaign. That may be because they do not want the party on their feet. Or because they think the chance of getting elected is better if they stay away. Or because they think their own chances would not be helped by associating openly with a representative of the "elephant interests."

Alderman Clarke made clear on Tuesday evening that he does not like living under decent civic conditions a little bit. There is nothing new or surprising in that. Of course, he can't make plain that he does not intend that these conditions shall continue if he can help it. And the point is that he can help it unless the respectable people in the city fill the council vacancies with men who have both brains and principle.

For the patriotic fund only cash is acceptable. For the Belgian relief fund cash is not what is wanted. Foodstuffs are what is required, and money contributions are turned into kind. A pig or a few bushels of potatoes, wheat, meat, or vegetables, is just as acceptable for this fund as its equivalent in money. An organized appeal of some sort to the farmers, seeking this plain, would bring in crops of precisely the sort of "relief" that is needed.

Premier Asquith and Bour Law are addressing personal letters to every householder on the voters' list in Great Britain, stating that more recruits are wanted and urging that the ranks be filled quickly. Hundreds of men have been waiting in Edmonton for a week for a chance to enlist, and have not got the chance yet, nor any assurance as to when they will get it. Several hundred of them have joined the local militia regiments and have been training day and night. Why this inaction in the face of such apparent need of men?

Upwards of one hundred Belgian reservists are waiting in Edmonton the chance to enlist. They would have joined their regiments by this time but that the Belgian government was unable to arrange their transportation. Their case is particularly hard, and the enforced inaction here is terribly disappointing. Surely the Government could make some special arrangement to enroll them and send them on to Salisbury Plains. As they are trained men, their late arrival would not at all interfere with the training of the contingent or delay its departure for the front.

## BELGIAN RELIEF

Belgian sacrifice made possible the preservation of the world's food supply.

The world owes Belgium more than it can ever repay. But the debt can be acknowledged by prompt aid to Belgians in distress, which is an unparalleled act of Belgian sacrifice.

Shall Belgium starve in a world of plenty?

Contributions to Belgian relief are received by R. T. Fisher, secretary of the Board of Trade, who is treasurer of the Belgian relief committee.

Give now. It will not be any use in the spring.

Cheer up! Dollar what can't break a farming country.

The Turk is making plain that he can be led by the nose.

The Y'man's Missionary movement is a challenge to the religious deadheads to get off and push.

Anyway, Turkey being at war with us, the Turkish smugderette may be barred from Canada. That is something.

One German paper regrets that those who blame the Kaiser for starting the war are not told to "shut your dirty mouths." How is that for culture?

The Endon has been destroyed, the Knighberg bottled up, and the Gier forced to intern. That rather dulls the vividness of the Casper-Horne-Amorik incident.

The Turk has joined the enemy, which is regrettable to the extent to which it increases the hostile forces. But there is a compensating consideration: The Turk might be on our side.

In war time spies are shot. In peace time they are merely jailed.

As time moves, if the spy is a menace in time of war, he is no less a menace in time of peace, and should get the same treatment.

A correspondent suggests that prospective candidates for the city council decline to run except on condition that Alderman Clarke will not be elected.

They could not be blamed for doing so. But would their doing so accomplish the end of freeing the city from the menace?

The elections have to be held, and if eligible candidates refuse to run the alderman could trot out a string of "official" excuses and get them elected by default.

As there is no way of voting against candidates but only of voting for candidates—the election of the ticket could not be prevented on no-voting day. It may as well be held.

It is a pity that the alderman, master of the situation. He cannot be made to resign, and has not enough regard for the city's interests to voluntarily vacate.

The only hope is that a sufficient number of candidates will be found who will consent to associate with him for a year in order to prevent him controlling the city.

The hope may not be very bright, certainly the prospect cannot be very attractive to the martyrs. But it is the only hope in sight.

Unless a sufficient number of candidates are willing to make the sacrifice, Alderman Clarke will be master of the city during the coming year.

Winnipeg military men are complaining that the Western Canadian supplies a disproportionately large number of the men for active service, an unfairly large number of the officers are selected from Eastern Canada. This is not the first time the criticism has been made, nor is Winnipeg the only point where it has been raised.

If there is a basis of fact in the allegations the Western officers are being unfairly treated. It is no basis of fact. The Military Department is being unfairly accused. In either event the continuance of the reports is not helpful to the task in hand.

The Militia Department should make it clear by its action that discrimination or by making plain that discrimination has not been practised.

## ANY DYSPETIC CAN GET WELL

By Taking "Fruit-a-lives" Says Capt. Swan

Life is very miserable to those who suffer from indigestion, dyspepsia, Stomach and Biliousness. This fact is known to all who read the "Fruit-a-lives" tells how to get quick relief from Stomach Trouble. Dr. H. B. Swan, of the "Fruit-a-lives" Co., says: "I have known many cases of indigestion and dyspepsia where the patient has lost all appetite and is unable to eat. A few days of 'Fruit-a-lives' will restore the appetite and the patient will be able to eat again. I have known many cases of indigestion and dyspepsia where the patient has lost all appetite and is unable to eat. A few days of 'Fruit-a-lives' will restore the appetite and the patient will be able to eat again."

It is a fact that "Fruit-a-lives" are sold by all druggists and grocers, or by mail order, for 25c. per box, or by mail order, for 25c. per box, or by mail order, for 25c. per box.
